

WORK SAFE. HOME SAFE.

Pause, Check Your Equipment, Then Power Up

Electricity is so common in the workplace that it can be easy to forget the danger it poses. It is unforgiving, so take a moment to check your equipment and work area.

Look for:

- Damaged cords
- Broken plugs
- Anything that doesn't seem right

Don't overload outlets or power strips, and don't use damaged equipment. Report any problems so they can be repaired or replaced safely.

If your job involves electrical work, make sure only qualified employees work on energized equipment. Follow lockout/tagout procedures before maintenance and never take shortcuts. They're just not worth the risk.

A few extra seconds spent checking your equipment today can help prevent a serious injury tomorrow.

Get home to your loved ones. Get home to do what you love. **Get Home Safe.**
